Quality Assurance Engineer

The Quality Assurance Engineer will be a member of the QA team responsible for developing and executing test plans for new features added to our AdMax Online Marketing Platform. This platform is used by our account managers to manage client search engine marketing campaigns and search engine optimization efforts. The environment is both exciting and challenging and requires excellent multitasking ability and the ability to juggle multiple high priorities.

Examples of Responsibilities:

- Organize test plans and schedules
- Coordinate work amongst the QA team – both in the U.S. and abroad.
- Work with the Engineering team to influence projects and resolve product issues
- Champion process improvement including automated regression testing
- Contribute to maintaining both internal and external documentation when necessary
- Review and supplement test plans with additional tests based on defects as well as analysis of code and test coverage
- Manually execute tests in various web browsers for our proprietary web application
- Use SOAPUI to test applications at the web service level
- Use SQL and various query tools to examine data to verify expected results

Requirements:

- Great organizational and team management skills
- Excellent oral and written communication skills
- Experience testing data-driven web applications both manually and using scripting languages or automated tools. Familiarity with SOAPUI a plus
- Proficient in QA automation concepts
- Familiarity with MySQL, SQL, and database schemas
- Knowledge of Linux, Apache, and web services
- Strong data analysis skills
- Familiarity with search engine marketing, web analytics concepts, or search engine optimization techniques a strong plus.
- Scripting experience in PERL or similar language is a plus.
- Bachelor's Degree in Computer Science, Information Systems or similar experience

The Search Agency is an Equal Opportunity Employer.

Results Driven Search Marketing and Optimization

Java Software Engineer

Are you looking for a chance to build a scalable architecture in Java, Linux, JBoss/JEE and OSS, using the latest and greatest technologies?

Are you proficient in Java, SOAP, MySQL and distributed, service-based architectures?

Do you have experience building software that transforms data and theory into actionable information? Can you make MySQL stand on its head to deliver results of complex queries in the blink of an eye? Are you effective using Linux as your development platform? Are you interested in performance optimization and tuning?

If so, and you have 3 or more years of experience writing systems using Java, managing your own work, working well in small teams with Scientists and other Engineers, embracing agile processes, and love writing clean, object-oriented code every day, this may be the position you have been looking for.

User Interface Software Engineer

Are you interested in working on a medium- to large-scale Web application suite, using the latest and greatest technologies?

Are you proficient in object-oriented PHP5, AJAX, GWT and SOAP? Do you have experience making highly user-friendly, clean and attractive Web-based interfaces? Can you make MySQL stand on its head to deliver results of complex queries in the blink of an eye? Are you effective using Linux as your development platform, and comfortable configuring Apache 2 to do what you need?

If so, and you have 3 or more years of experience building responsive and user-friendly applications in PHP and/or GWT, managing your own work, working well in small teams, embracing agile processes, and love writing clean, object-oriented code every day, this may be the position you have been looking for.

Internships

Internships are available for Java Developers, PHP Developers and QA Engineers.
